HafizeBot Guide

What HafizeBot is, what VIP adds, how to join, and where to check the record.

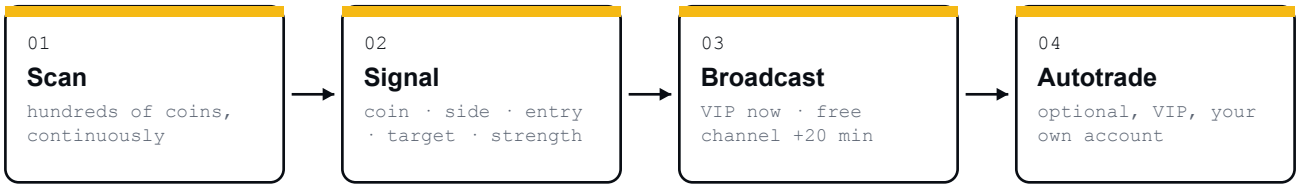

October 2026

CHAPTER 1

What HafizeBot is

HafizeBot is an AI-driven signal service for Binance USDT-M futures. Its model watches hundreds of coins around the clock, scoring them across **240+ indicators, formulas and components**, and broadcasts a signal when it finds an entry worth taking. Each signal names the coin, the direction, an entry price, a target price and a strength rating. VIP members can also let the bot trade those signals on their own Binance account.

What a signal contains

Signals come in 24 named **elements**, and every element signal carries the same fields:

ANATOMY OF AN ELEMENT SIGNAL

Element	which of the 24 named signal types fired
Coin and side	the futures pair and LONG or SHORT
Entry	the price at the moment of the signal
Target	the price at which the signal is considered done
Profit	distance from entry to target in percent, without leverage
Strength	a rating from 0 to 5; higher ratings are rarer

How many signals arrive per day is not fixed. It depends on the market: volatile days produce more, quiet days can produce almost none. The aim is consistency, not volume. Higher-strength signals appear less frequently. Strength rates the signal; it is not a forecast, and the record in Chapter 5 shows how every signal turned out.

Where the signals go

- **VIP channel** — every element signal the moment it fires, plus the hourly VIP reports.
- **Free channel** — the same element signals, 20 minutes later: t.me/getbinancefutures.
- **Your Binance account** — if you are a VIP member and have switched the autotrader on.

BEFORE YOU START

You need a **Telegram username** to use the bot. Without one, @hafizebot answers every message with an error until you set one in Telegram settings.

CHAPTER 2

Free vs VIP

The free channel is the full product with a 20-minute delay. VIP removes the delay and unlocks the autotrader, the hourly reports and the settings that shape how the bot trades for you.

	Free channel	VIP Tier 1	VIP Tier 2	VIP Tier 3
Element signals	20 min delay	Instant	Instant	Instant
Autotrading on your Binance account	—	Yes	Yes	Yes
Position size per entry	—	5–50 USDT	5–10,000 USDT	5–50,000 USDT
Open positions at once	—	up to 10	up to 100	up to 500
Filter by signal type (ban elements)	—	—	Yes	Yes
Ban whole Binance groups (TradFi, Meme, …)	—	—	Yes	Yes
Min strength, coin banlist, stops, take-profit mode	—	Yes	Yes	Yes
Smart sizing, trade rules (stop, gap, cap, leverage per kind of trade), take-profit distance	—	—	Yes	Yes
Minimum 24h volume and minimum coin age	—	—	Yes	Yes
Loss limits, entry cap, maximum hold time, 24h skips for new coins	—	—	—	Yes
Drawdown brake and funding pause	—	—	—	Yes
Size and position limit that follow your wallet	—	—	—	Yes
Close before a delisting (/setDelistingClose)	—	Yes	Yes	Yes
Hourly VIP reports	—	Yes	Yes	Yes
Direct line to the team	—	Yes	Yes	Priority
Price	Free	50 USDT / month	100 USDT / month	200 USDT / month

Free 3-day VIP trial. Send `/trial` in @hafizebot to try VIP for three days. While the trial runs, autotrading is capped at 10 USDT of margin per trade and 3 open positions at once, whatever your settings say.

Plans

TIER 1

50 USDT

per month

or 500 USDT for 12 months — 2 months free

- Instant signals + autotrader
- Position size up to 50 USDT
- Up to 10 open positions

TIER 2

100 USDT

per month

or 1,000 USDT for 12 months — 2 months free

- Everything in Tier 1
- Position size up to 10,000 USDT
- Up to 100 positions
- Smart sizing, trade rules, signal and group bans

TIER 3

200 USDT

per month

or 2,000 USDT for 12 months — 2 months free

- Everything in Tier 2
- Position size up to 50,000 USDT
- Up to 500 positions, priority support
- Loss limits, hold time, drawdown brake, funding pause
- Size and limit that follow your wallet

Annual plans cost twelve months for the price of ten. The bot's `/plans` command always shows the current list.

ONLY THROUGH HAFIZEBOT ITSELF

VIP is sold only in @hafizebot and on hafizebot.com. HafizeBot works with no resellers, partners or agents, and nobody — including the people who run HafizeBot — will ever ask you for an extra fee in a private chat.

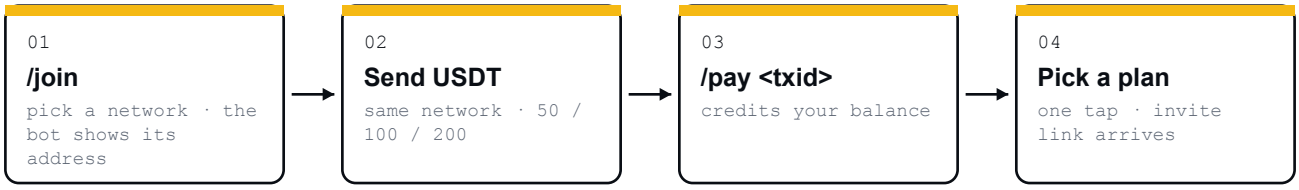

CHAPTER 3

How to register and pay

NO TELEGRAM?

Everything in this chapter also works on hafizebot.com: sign in with your email at **hafizebot.com/app/login** (the code creates your account), pay under Billing, then find the signals under Signals and connect Binance under Keys.

Payment is in **USDT**, on one of the networks `/join` offers: **BEP20 (BSC)**, **TRC20 (Tron)**, **Solana** or **TON**. Each network has its own address. A transfer on another network or in another coin cannot be verified, so the membership cannot be granted.

Step by step

- Send `/join` to @hafizebot and tap the network you will send on. The bot replies with our USDT address on that network; `/howtowithdraw` walks through the Binance screens one by one.
- In Binance: Wallet → Spot → Withdraw → USDT, on the **same network** as the address you picked. Send **50 USDT** for Tier 1, **100 USDT** for Tier 2 or **200 USDT** for Tier 3. Our address is a Binance address, so from a Binance account the transfer is internal: no fee, and the full amount arrives. From another wallet, add its network fee so that the full price arrives. Funds sent on another network can be lost.
- Copy the **TxID** from Wallet → Transaction History → Withdrawals — the long string your wallet shows (on BEP20 it starts with 0x) — and send it as `/pay 0x…` (`/deposit` does the same). If Binance shows "Internal transfer 123456789" instead of a TxID, the transfer stayed inside Binance and cost no fee — send that number: `/pay 123456789`.
- The bot verifies the transfer and credits the exact amount to your **balance**. It then offers the plans your balance covers — tap one, or send `/buy tier1`, `/buy tier2` or `/buy tier3`; add `annual` for twelve months (`/buy tier1 annual`).
- Your **single-use invite link** to the VIP channel arrives right after the purchase.

Balance, renewal and reminders

- `/balance` shows your USDT balance and the plans it covers; `/status` shows when your VIP expires.
- To renew, top up with `/pay` and buy again with `/buy` — a monthly plan adds one month, an annual plan adds twelve.
- `/subscribe` turns on **auto-renew**: when your VIP is within 3 days of expiry and your balance covers your current tier for a month, the renewal runs by itself. `/subscribe off` turns it off.

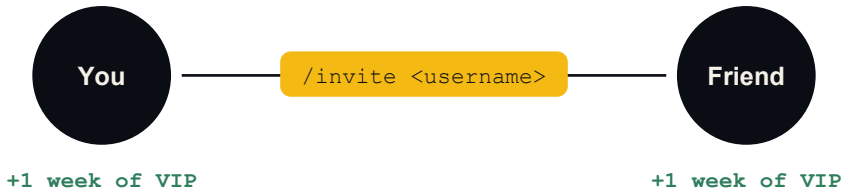

- The bot reminds you **3 days before expiry**. When VIP ends, the bot stops opening new positions; open positions and your settings stay as they are.
- Have a coupon? `/coupon CODE` redeems it.

> IF A DEPOSIT IS NOT FOUND
> Transfers are verified automatically for 3 days; give Binance a few minutes to confirm before you retry. After 5 transfer IDs that do not match, `/pay` locks for your account — then send the transaction ID to @Hafizebotadmin on Telegram, or email hello@hafizebot.com with your Telegram username and the transaction ID, and the team will credit it by hand.

CHAPTER 4

Invite a friend

Referrals are simple and symmetrical: when someone joins VIP after naming you as their reference, **you both get one extra week** of VIP time. There is no limit to how many people you can refer.

- The new member sends `/invite <your Telegram username>` to @hafizebot **before** buying VIP.
- The reference must be an active VIP member.
- The bonus is applied once, at the moment the new member's VIP activates.

Hourly VIP reports

Besides the element signals, the VIP channel receives short hourly reports. They are **informational only**: the autotrader never acts on them, and they say nothing about how element signals are produced.

Report	Cadence	What it is
Cheap Coins	Hourly, VIP	Coins the report ranks as cheap right now, per chart period
Weakest Coins	Hourly, VIP	Coins the report ranks weakest right now, per chart period, each marked 1 to 5 (more marks, weaker)
TradingView Recommends	Hourly, VIP	Strongest coins by TradingView's own aggregated technical rating

CHAPTER 5

Where the record lives

Judge HafizeBot on its record, not on its marketing. Every element signal is scored and published, including the ones that did not work.

Where	What you will find
`hafizebot.com/performance`	Every broadcast signal since June 2026, rebuilt hourly from the trade database. **Win** = target reached, **loss** = stop reached, **expired** = maximum hold reached with neither. The target-hit rate counts expired signals against it. A month is final once its newest signals have had their full time; until then the page marks it as still settling. From 3 October 2026 signals have longer to reach their target, and earlier months were scored again under the same hold.
`hafizebot.com/reports`	The monthly order spreadsheets from 2021–2024, one file per month. The same files are available in the bot under `/results`.
`hafizebot.com/data`	The complete 2021–2024 signal archive as one downloadable file, misses included.
`hafizebot.com/pairs`	The archived record broken down per trading pair.
`Free channel`	t.me/getbinancefutures — the element signals with a 20-minute delay, and their outcomes.

The unleveraged PnL figures on those pages are the sum of the signals' price moves. They are not an account return and not a forecast: your result depends on your position size, leverage, stop and how many signals you take.

Getting help

- Questions that need an answer go to **@Hafizebotadmin** on Telegram, spelled exactly like that: the team replies there, usually within a day. `/support` in @hafizebot sends feedback to the team.
- Email **hello@hafizebot.com** for payment questions; include your Telegram username and the transaction ID.
- `/guides` downloads this and the other guides; `/help` lists the commands available to you.

> RISK DISCLOSURE
> Cryptocurrency futures trading carries a high risk of loss and is not suitable for every investor. Signals and autotrading are tools, not financial advice. Past performance does not guarantee future results. Never trade with money you cannot afford to lose.
